SUMMARY

Master's student in AI Engineering at Stony Brook University with nearly three years of professional software engineering experience building data pipelines, REST APIs, and distributed systems at scale. Background spans applied machine learning research, AI model evaluation, and full-stack development, with hands-on experience in Python, Java, SQL, and cloud platforms. Comfortable working across technical and non-technical teams, and experienced in teaching and presenting technical work to broad audiences.

EDUCATION

M.S., AI Engineering | Stony Brook University Aug 2026 – Dec 2027
Relevant Coursework: Deep Learning Algorithms and Software, Stochastic Systems, Advanced Digital System Design and Generation

B.S., Computer Science | Alabama State University Jan 2018 – May 2021

EXPERIENCE

Software Engineer | Alfa Insurance Apr 2023 – Jan 2025

- Architected and implemented a real-time data processing pipeline using Kafka Streams, replacing a legacy batch process while maintaining continuous integration and deployment.
- Designed and integrated distributed systems using a microservices architecture to improve scalability and maintainability.
- Investigated and resolved data quality issues in production pipelines, and collaborated with cross-functional teams to align technical solutions with business objectives.

AI Coding Evaluator (RLHF) | Outlier AI Sept 2023 – Jan 2025

- Evaluated and validated large language model outputs against defined accuracy criteria, providing structured feedback that reduced error rates and improved model performance.

Software Engineer | FIS Global Sept 2021 – Dec 2022

- Architected and developed REST APIs using Spring Boot and Angular, serving over 1 million users.
- Implemented OAuth and SAML security protocols for banking platforms, ensuring OWASP compliance.
- Designed and deployed microservices architecture using Java Spring Boot to improve system scalability and performance.

Software Engineer Intern | HCLTech (Remote) Jan 2021 – May 2021

- Developed an internal tool to automate conversion of IBM mainframe EBCDIC-encoded files to ASCII format.
- Implemented a Spring Boot REST API for backend development and used Angular for the user interface with comprehensive documentation.

Student Research Assistant | Alabama State University Oct 2019 – May 2021

- Analyzed three decades of spatio-temporal Air Quality Index (AQI) data using machine learning algorithms to identify trends and patterns, building visualizations in Tableau and R.
- Presented findings as a poster presentation at a university conference, fielding questions from attendees.

Teacher | Microsoft TEALS Volunteer Aug 2022 – Feb 2023

- Taught Introduction to Computer Science, including Python and Snap, to 70+ high school students using project-based learning.

SKILLS

Languages: Python, Java, SQL, R

AI & Data: Machine learning, model evaluation (RLHF), data pipelines, data validation, Tableau

Frameworks & Messaging: Spring Boot, Angular, REST APIs, Kafka, microservices

Databases: SQL Server, Oracle, MongoDB

Cloud & DevOps: AWS (IAM, EC2, RDS), GCP, Git, Jenkins, Maven, Octopus, CI/CD
